DESCRIPTORS Bibliographies; *Book Catalogs; *Cataloging; *Computer Output Microfilm; Information Retrieval; *Information Storage; *Libraries; Library Technical Processes; *On Line Systems

ABSTRACT

This listing of 227 citations includes references to existing book, computer output microfilm, and online catalogs, the cost of conversion, the success of existing systems, Anglo-American Cataloging Rules (AACR 2), and the Preserved Context Indexing System (PRECIS). It is intended to aid libraries in making major decisions on what form their catalogs will take in the future. References for non-U.S. journals, some not in English, have been mentioned to give a broader perspective of the issue at hand: however, it is pointed out that there are many differences in costs, equipment, and user expectations for a catalog outside the United States. | PRECIS | 17 |

INTRODUCTION

During the next few years many libraries will be faced with major decisions on what form their catalogs will take in the future. With improvements in computer output microfilm systems and the decreasing costs for computer time and on-line systems, manual card files are losing ground. Not only are the manual systems in some cases becoming as costly to maintain, but their automated counterparts offer increased capabilities for access points, faster updates, and the possibilities of remote catalogs in physical locations other than the library.

This bibliography lists 119 citations on these alternatives. Included are references to existing book, COM and on-line catalogs, the cost of conversion and the success of existing systems. References for non-US journals, a few not in English, have been included to give a broader perspective to the issue at hand. The book and COM catalogs have had more exposure in England and other European countries than in the United States. In consulting these references it should be kept in mind that there are many differences in costs, equipment and user expectations for a catalog outside the United States.

Also included are 39 references on AACR 2 and 69 references on PRECIS (Preserved Context Indexing System). Both of these topics have been discussed in conjunction with the closing of card catalogs. The Library of Congress will time the freezing of their card catalogs with the introduction of AACR 2, now scheduled for January 1, 1981. A study of PRECIS by the Library of Congress resulted in the decision not to implement PRECIS.
